

- > Digital HDMI and Analog HD video output.
- > Automatic SONY camera recognition.
- > Video format selection with micro switches.
- > 6 x keyswitch channels for zoom & memory control.
- > TTL or RS232 VISCA dialog level.
- > 6 to 12 VDC protected power supply for interface and camera.

Features

More than a video transmission module, the TWIGA HDMI interface is the heart of an industrial vision OEM system.

Compact size

Highly compact, the electronic module can be fixed at the rear of all SONY FCB HD without disturbing the mechanical integration.

Low power consumption

The board uses components that require little energy. Internal supply voltages are lowered. The intensity that circulate in components is reduced in order to lower the consumption. This also reduces the radiated emission for EMC regulation. It confers on the module an EMC behavior suitable with the hardest medical and aeronautical standards.

Key switch local control

Connecting the camera to a computer system to drive it, is not necessary. Switches or Pushbuttons allow the modification of the camera video format as well as the control of the main VISCA functions.

The most used functions: zoom, freeze, factory preset are preprogrammed, but it is possible to modify this configuration to replace them by your own OEM functions.

OEM Embedded Image processing functions

The TWIGA HDMI interface is based on an oversized Xilinx FPGA for a simple signal transmission application. Graphic overlay and image processing functions can be applied to the image flow in real time.

Auxiliary power output

The TV80 0005 & TV80 0006 feature an auxiliary 5V/ 1A output. This can be used to supply external devices such as a microcontroller based active keyboard or a TWIGA WHDI TV10 0007 wireless video transmission system.

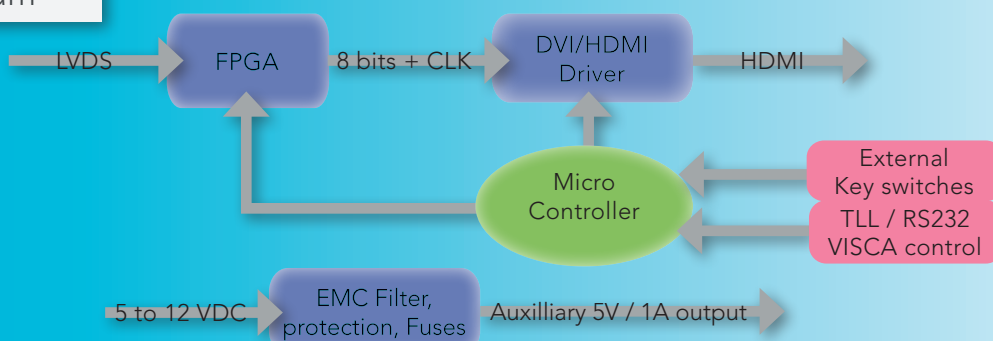

Connection with FCB H11

Connection with FCB EH & SE600

Bloc diagram

SONY FCB H11 / FCB EH HDMI Interface specifications

	H11	EH6300	EH3400	EH3300	EH3150	SE 600
